Made in China

Low Level Flush Pipe

Installation Instructions

1. Measure the distance of the pan inlet to the cistern outlet centre. Add 25mm to this measurement to allow for the Flush Pipe to be inserted into the pan inlet, and cut the Flush Pipe to this length.
2. Fit the Keeseal onto the inlet end of the Flush Pipe.
3. Insert the Flush Pipe into the pan inlet using a small amount of lubricant. Place the Coupling Nut, Slip Ring (with flat edge facing downwards) and Kinkco Seal over the Flush Pipe.
4. Tighten the Coupling Nut onto the cistern to create a water tight seal.

NOTE: Kinko seal, slip ring, coupling nut and keeseal not included.

Always ensure work is carried out by a licensed plumber.
Warranty claims can only be made with proof of installation by a licensed plumber.
